Sealant, fire-resistant, 276
Sheppard, David T., 65
Singh, Harpal, 272
Singh, Ilam, 272
Singh, Sahab, 272
Sliepcevich, Cedomir M., 260
Small-pool flames, radiative characteristics and structure of, 308–322
experiment, 309
irradiance of three fuels, 314–315
mean radiance, contours of, 318–320
previous study, 312–313
radiative characteristics, 315–316
standard deviation, contours of, 320–321
structure, 315–316
temperature contours, 316–317
thermography, 308–312, 314, 317, 319–320, 321–322
variation coefficient, contours of, 321
Smith, Edwin E., 333
Smoke, as factor in World Trade Center evacuation, 182–186, 188
Smoke damage, nonthermal, due to fires, 369–370
Smoke detectors
computer modeling, 209–210, 211, 214–215
residential building fires, 201, 203, 205–206, 209–210, 211, 214–215
smoke and odor sources, discrimination between, 6–7, 14–17, 20–21
Smoke developed index, 65, 66, 69–74
Smoke hazard, estimated from Steiner Tunnel smoke data, 65–75
Smoke in residential fires, 195, 201–203, 205–211, 214
Smoke inhalation, 195, 352, 360
Smoke production, façade fire tests, 226
Smoke release calculations from Steiner Tunnel test data, 65, 67, 69–74
Smoldering fires, detection of, 6, 15–17, 20–21
Southwest Research Institute façade fire tests, 220
SP 105, 221–226, 228
Sprinkler systems
computer modeling, 207, 210, 213, 215
fire safety design calculation, 324
residential building fire, 196, 201, 203–204, 205, 207, 210, 213, 215
in tunnels, 117
Sprinklers
fast response, 196, 201, 203–204, 205, 207, 210, 213, 215
fire venting, interaction with, 26, 42–43, 47
Stack effect, World Trade Center explosion, 182–186
Stairways, World Trade Center, evacuees' behavior in, 182–186, 188
Standards. See Building codes and standards
Steel-stud gypsum board wall assemblies, heat transfer through, 239–259
equations, 243–246
experiment descriptions, 247–252
experimental results, 252–255
failure criteria, 252
mathematical model, 241
model description, 242–243
model results, 253–255
thermophysical properties of gypsum board, 247, 258–259
time-temperature relationship, 241–242
unexposed side, 255
Steiner Tunnel test, smoke hazard estimated from smoke data, 65–75
Stud walls, gypsum board protected. See Steel-stud gypsum board wall assemblies, heat transfer through
Substrates, effect on wallcovering fire performance, 231–238
Sultan, Mohamed A., 239
Swedish National Testing and Research Institute façade fire test, 221–226, 228–229
